Economic Analysis in Communications and
Information Technology

Economic Analysis in Communications and Information Technology

Introduction:

The economic analysis is a scientific method of research and a logical method of economic study, through which the factors influencing the behavior of economic phenomena can be explained. And it provides us with the different logical tools that are used to derive the different economic theories. If the theory represents the conclusion, the analysis represents the research platform.

There are different classifications of the types of economic analysis On different criteria related to the size of the economic unit covered by the analysis and the degree of comprehension desired by the analyst and can be classified economic analysis: to partial analysis, and comprehensive analysis.
