

MS SQL Server DBA Training Course

MS SQL Server DBA Training Course

Introduction:

Database Administrators DBAs are responsible for the design, implementation, support, and maintenance of computerized databases in today's organizations. The role also includes architecting, building, and scaling databases for future data growth and capacity. They are also responsible for the security, performance, and availability of data to users and customers. All the above tasks are performed with the help of a Database Management System DBMS and the leading and most widely used DBMS across the world today are the Oracle, Microsoft SQL Server, MySQL database, etc.

Course Objectives:

At the end of this course, the participants will be able to:

- Understand database indexes.
- Check index fragmentation and maintain them.
- Understand and maintain SQL Server Database statistics
- Understand SQL Server Profiler
- To create SQL Server traces.
- To run server-side traces

Targeted Audience:

- Anyone who wants to start a career in SQL database administration
- Anyone who wants to have complete SQL database training to get a job in IT
- Anyone who wants to advance his/her career
- Anyone who wants to master the SQL command-line skills
- College students
- IT professionals
- Teachers and instructors
- Anyone who wants to get certified in MCSA and MTA certification
