Security Management, Planning and Asset  
Protection with Integrated Security Solutions

# Security Management, Planning and Asset Protection with Integrated Security Solutions

## Introduction

The only way to build value-added departments is with envisioned Security executives who are equipped with the requisite specialized skills and knowledge. The risks and challenges to security increase along with the speed at which the world and technology change. Some businesses commit the serious error of considering their security personnel and departments to be lower level tasks. However, a strong security culture will clarify the purpose of the security discipline and explain the benefits and cost-benefit analysis it will bring to the organization.

This training seminar is designed to give participants the specialized security knowledge they need to carry out their management and supervisory responsibilities in accordance with international standards in Security Planning, Asset Protection, and Integrated Security in order to achieve this consistent level of best practice.

## Course Objectives

At the end of this course, participants will be able to:

- Defining the significance and elements of a comprehensive security system
- Locating and using access control systems efficiently
- Putting CCTV system into place and planning
- Using perimeter protection systems correctly
