Seminar: Business Process Analysis &  
Modelling

## Seminar: Business Process Analysis & Modelling

### Introduction:

Business process analysis and modeling is an essential component of Business Process Redesign BPR as well as other business process improvement initiatives such as reengineering, systems development, quality management, and continuous process improvement. In this course, the participants will acquire the knowledge and skills to analyze and accurately model business processes at the enterprise level as well as the detailed workflow level.

Participants will learn the Integration Definition for Process Modeling IDEF0 method and the Business Process Diagram notation. These are open modeling standards that are used by many leading business process modeling tools. They are easy to understand and can be applied to all aspects of business process innovation. These methods facilitate rigorous analysis, creative thinking, and the development of information technology systems

### Course Objectives:

At the end of this course the participants will be able to:

- Analyze the process dimension of the business
- Define the scope of a business process
- Develop an enterprise-level business process model
- Capture and map the details of an existing business process using a model
- Build an integrated model of a defined business process showing its levels of detail
- Obtain the information necessary to build a business process model
- Identify business process improvement opportunities using a model
- Apply best-practice business process modeling techniques
- Implement business process improvements to achieve breakthrough results

### Targeted Audience:

- Business Process Analysts, Engineers, Consultants, and Managers
- Managers or Directors of Business Performance Improvement
- Process Owners
- Quality Assurance Analysts and Managers
- Business Planners

### Course Outlines:

#### Unit 1: Understanding Business Processes:
