Advanced Contracts & Project Management

REF: U328 DATE: 16 - 27 September 2024 Venue: London (UK) - Landmark Office Space Fee: 7950 Euro

Introduction

In the present competitive business environment, there is an ever-increasing emphasis on the timely market introduction of products. Owners are extremely sensitive to global market forces and are seeking to reduce project costs and duration. This then confronts Contractors and Suppliers with increased challenges to meet these demands without jeopardizing their commercial positions. Contracts are the basis of all projects and establish the responsibilities and rights of the parties. Once the contractual matrix is established, competent project planning and execution techniques are essential tools to achieve the goals of a project, particularly within compressed or accelerated conditions.

This highly interactive program will provide a practical hands-on approach to the effective creation of contracts and the management of both the contract and the project to which it relates. It will also offer techniques and contract strategies to assist this process, including establishing a risk management strategy with reference to contracts, techniques for managing the planning, and developing good business practices to take advantage of opportunities, enhance efficiency and increase profitability.

Course Objectives

At the end of this course, the participants will be able to:

- understand necessary contractual and legal knowledge.
- understand the application of different types of agreements.
- increase commercial awareness needed to enhance the smooth running of contracts.
- ability to identify and mitigate risk factors and associated commercial and program implications.
- understand the importance of checklists, file management, and standardization of documentation effectively to reduce the exposure to risk.
- understand various project delivery systems.
- increase understanding of commercial liabilities resulting from schedule changes and variations.
- ability to conduct a cash flow analysis.
- ability to apply Advanced Scheduling techniques.
- methods to develop a Project Control System.
- skills at handling both reactive and proactive project management techniques.
- ability to analyze, negotiate and implement the most appropriate method of resolving disputes preventing escalation by early identification.
- improved managerial approaches to both contract and project management
