# Advanced Cash Flow & Working Capital Management

REF: C645 DATE: 21 - 25 July 2024 Venue: Cairo (Egypt) - Fee: 4095 Euro

## Introduction:

In recent years there has been a growing recognition that, in the long run, effective management of cash flow is more important than profit. Long-term cash flow is the real value of a business. It has also been recognized that there is significant potential for improved financial performance from the more effective management of working capital - both directly from immediate cash gains and reduced net interest costs, and indirectly through its impact on increased profitability and return on capital employed. A key challenge in achieving these performance improvements results from the fact that actual levels of working capital and delivery of cash flow are effectively determined by the day-to-day actions of a great many managers and staff, which in large corporations often run into tens of thousands.

This conference covers the principles, techniques, and skills involved in the effective management of cash flow and working capital in any business

## Conference Objectives:

At the end of this conference the participants will be able to:

- Understand the fundamentals of effective management of cash flow, including the optimization of the level of working capital.
- Develop practical experience of how to manage cash flow and optimize working capital to facilitate such delivery in real-life business situations.
- Increase personal financial skill levels
- Develop confidence through understanding the major drivers of successful financial performance.
- Learn many technical skills, all of which lead to the ability to calculate the required figures and implement them into value-adding business decisions.
- Understand balance sheets and profit-and-loss statements
- Understand the importance of cash as the lifeblood of a business
- Focus on key management areas of inventory accounts receivable and accounts payable
- Understand how to control and manage the cash flow of a business
- Forecast cash flows and draft a cash budget
- Evaluate projects based on their expected cash flows
- Incorporate risk into financial decisions
