Financial Analysis, Modelling & Forecasting

REF: F158 DATE: 27 - 31 May 2024 Venue: Dusseldorf (Germany) - Fee: 5940 Euro

Introduction:

A thorough hold of the principles of financial analysis is a key competency needed for the effective management of a business. This program goes far beyond the typical financial analysis program. It uses both the principles of analysis and the power of Excel to identify the strategic drivers that can dramatically enhance the shareholder value of your organization.

Course Objectives:

At the end of this course the participants will be able to:

- Develop the basics of strategic financial planning
- Apply the latest financial analysis techniques
- Use the tools of finance, such as the time value of money
- Determine key performance indicators to manage the drivers of business success
- Create tools to use within their own business
- Identify the key steps in developing a financial model
- Analyze a company's annual report identifying key performance indicators to understand what the numbers are saying and make projections of future performance
- Understand the theory of interest and the time value of money and their applications
- Develop an Economic Value-Added model to see the organization from the shareholders' perspective
- Extend the benefit of Capital Investment
- Learn how to use Excel® tools such as Solver, Goal Seeker, and Scenario
- The impact upon shareholder value
- Develop greater confidence in discussing financial strategy

Targeted Audience:

- Financial Accounting Team Members
- Cost and Management Accounting Staff
- Finance Managers
- Planning Managers
- Commercial Managers
- Capital Investment and Project Team Members
