Best Practices for Maintenance Data Collection, Knowledge Management & Maintenance Planning

REF: O1032 DATE: 1 - 5 September 2024 Venue: Dubai (UAE) - Fee: 5830 Euro

Introduction:

This program is focused on helping you develop a Maintenance Knowledge Management System for your Organization which is then used as a basis for Maintenance Planning.

It covers issues related to the collection of maintenance data in a form suitable for use in a System of Maintenance based on Facts.

The term Data is used in the widest term and includes Equipment History, Maintenance Records, Maintenance Procedures, Customer Real Needs, New Developments, Cost Data, and other Future Actionable Data.

This program's recommendations are compatible with any CMMS you might be currently using. This program is relevant to both Routine Maintenance and Plant Shutdown Maintenance.

Course Objectives:

At the end of this course, the participants will be able to:

- Understand Maintenance Business Processes
- Design and implement maintenance plans
- Understand how maintenance management affects productivity & profitability
