Conference: The Internal Audit School

REF: C1983 DATE: 8 - 19 December 2024 Venue: Istanbul (Turkey) - Sheraton Istanbul Levent Fee: 8775 Euro

Introduction

Internal auditing is a crucial job that many businesses rely on. A good internal auditor finds things that other managers of the business miss, potentially saving them from costly inefficiencies, operational errors and fines or other legal troubles. Many companies may even have a team of internal auditors of various skill levels looking over different areas of the business.

If you want to join such a team, you need to do anything you can to make yourself stand out. A bachelor's degree in accounting, business or finance is a great start, but it's more than likely that the firms you want to work for will be looking for something more when it comes to your internal auditor education.

Our Internal Auditing Training program is an ideal way to continue your internal auditor professional education, especially when you use it to build on our Fraud Auditing Boot Camp class. Although we will put you through your paces during that seminar, you will not have to take a significant amount of time off from work to go through it. You could have the knowledge and background you need to qualify for a promotion at your current position or seek out an internal auditor position at a more desirable company.

This intensive seminar covers many key auditing functions, provided by expert instructors in a clear, digestible way so you can absorb all the most important points throughout those and bring them back to your current job or new employer. If advancing in your career as an internal auditor and building your base of auditing knowledge is important to you, this program is a must.

Conference Objectives

At the end of this conference, the participants will be able to:

- Master fundamental operational auditing techniques
- Learn how to use a risk-based approach to enhance their audits of the Purchasing, Marketing, Human Resources, Information Technology IT, Management, Finance, Treasury, and Accounting functions.
- Explore the objectives of major business operation areas and learn how to identify the key risks threatening them
- Find out how to make their audits more efficient and effective and how to use data analytics to gain an in-depth understanding of business processes.
- Cover such critical areas as the impact of SOX, ERM, and GRC on the organization, uncovering fraud schemes that threaten business operations, and the role of IA in helping management build strong risk management and strategic planning processes.
- Gain skills necessary to go beyond outputs and to examine the organization's ability to achieve the necessary outcomes.
