Comprehensive Guide to Heat Exchangers

REF: L407 DATE: 29 April - 3 May 2024 Venue: London (UK) - Landmark Office Space Fee: 6375 Euro

Introduction:

This training program provides an in-depth presentation of the main types of industrial heat exchangers, their key features and aspects, and provides practical guidelines for selecting the appropriate type for specific applications. Participants will better understand how to use the applicable API, TEMA, and ASME codes, standards, and recommended practices.

Program Objectives:

At the end of this program, the participants will be able to:

- Highlight the pivotal function and significance of heat exchangers in cost-effective plant operations.
- Provide a clear understanding of the fundamentals of heat transfer and hydraulics and fluid flow and their application in the thermal design of heat exchangers.
- Provide methodologies for the mechanical design of heat exchangers following the industry codes, standards, and best practices, specifically ASME BPVC Section VIII, TEMA, and API 660, 661, and 662.
- Understand the cost-effective technologies and best practices for improving the performance of heat exchangers.
- Gain essential and integrated knowledge about the hydraulic, thermal, and mechanical design of heat exchangers.
- Understand, predict and identify causes of performance degradation and damage mechanisms that affect heat exchangers fitness for continued service and thereby reduce the risk of potential failures and waste of energy.
